Devanshi Sharma

Email: devanshi.sharma@email.com | Phone: +91-XXXXXXXXXX | Location: India | GitHub: github.com/devanshi | LinkedIn: linkedin.com/in/devanshi

Skills

- scalable web applications and AI-powered systems. Skilled in integrating AI APIs
- building
- agent-based workflows
- and developing backend services. Quick learner with a strong
- Languages: Python
- JavaScript
- TypeScript
- Frameworks: React
- Next.js
- FastAPI
- Node.js
- AI & Tools: ChatGPT
- Claude
- OpenAI APIs
- Prompt Engineering
- AI-assisted development
- Core Concepts: Data Structures
- Algorithms
- System Design
- REST APIs
- Cloud & Tools: AWS
- Docker
- Git
- CI/CD
- Other: Real-time systems
- WebSockets
- Streaming pipelines
- Python
- React
- ChatGPT
- Data Structures
- AWS
- Real-time systems

Experience

- Software Engineer | AI Systems
- Software Engineer with strong programming fundamentals and hands-on experience in building
- Software Engineer | AI Systems Project
- Built and deployed AI-powered applications using LLM APIs
- Designed and implemented agent-based workflows for automation tasks
- Developed scalable backend services using FastAPI and Node.js
- Integrated real-time streaming pipelines using WebSockets and FFmpeg
- Collaborated with cross-functional teams to deliver features efficiently
- problem-solving mindset and a passion for exploring new technologies.
- Software Engineer | AI Systems Project - Built and deployed AI-powered applications using LLM APIs, designed and implemented agent-based workflows for automation tasks, developed scalable backend services using FastAPI and Node.js, integrated real-time streaming pipelines using WebSockets and FFmpeg, collaborated with cross-functional teams to deliver features efficiently

Achievements

- Reduced latency by optimizing real-time processing pipeline in AI Interview Bot project

Projects

- AI Interview Bot
- Developed a real-time AI interview system using STT, LLM, and TTS pipelines
- Implemented streaming architecture using WebSockets and Pub/Sub
- Reduced latency by optimizing real-time processing pipeline
- Automation Agent System
- Built AI agents capable of automating workflows and decision-making
- Integrated multiple APIs and tools for task execution
- AI Interview Bot - Developed a real-time AI interview system using STT, LLM, and TTS pipelines, implemented streaming architecture using WebSockets and Pub/Sub
- Automation Agent System - Built AI agents capable of automating workflows and decision-making, integrated multiple APIs and tools for task execution

Education

- Bachelor of Technology in Computer Science
- Additional Information
- Strong ability to learn new technologies quickly
- Passionate about AI systems and automation
- Excellent problem-solving and analytical skills
